POUF "CUBIK"

POUF "SIX" con effetto bombè

POUF "BASIK" con effetto bombè

CUSCINI VOLANTI IN MOLLAPIUMA

**STRUTTURA:** La struttura in legno è ricoperta da poliuretano espanso a quote differenziate e resinato accoppiato a maglia per l'effetto "morbido". Il molleggio è affidato a cinghie elastiche di elevato profilo tecnologico che vengono applicate meccanicamente. **IMBOTTITURA:** I cuscini di seduta sono in poliuretano espanso sagomato ed indeformabile a quote differenziate ricoperte in tecnoform più vellutino. Gli schienali sono in poliuretano espanso sagomato ed indeformabile ricoperto in tecnoform più vellutino (vedi foto). I vari cuscini volanti sono in mollapiuma lavata e sterilizzata divisa a scomparti, il tutto rivestito in tela bianca di cotone 100% antipluma (vedi foto). Gli elementi confezionati in tessuto sono completamente e facilmente sfoderabili. Possibilità di confezionare i divani in pelle. Piedi in acciaio oppure in legno di rovere sbiancato.

**STRUCTURE:** The wooden structure is in foamed polyurethane of different densities and in a resin coated material together with fabric for a "soft" effect. The springs are composed of flexible hi-tech belts that are applied mechanically. **PADDING:** The seat cushions are in shaped and non-deforming foamed polyurethane of different densities covered with Tecnoform and imitation velvet. The backs are in shaped and non-deforming foamed polyurethane covered with Tecnoform and imitation velvet (see photo). The various scatter cushions are in washed and sterilised "mollapiuma" divided in different sections, all covered with white cotton feather-retaining fabric 100% (see photo). The fabric elements all have covers that are easy to remove completely. The sofas can also be upholstered in leather.

**STRUCTURE:** La struttura in legno è ricoperta da poliuretano espanso a quote differenziate e resinato associato a tessuto elastico per un effetto "molle". La sospensione è a sangle elastiche tecnologicamente avanzate che sono applicate meccanicamente. **REMBOURRAGE:** Les coussins d'assise sont en polyuréthane expansé galbé et indéformable à différentes cotes recouvertes en tecnoform plus petit velours. Les dossiers sont en polyuréthane expansé galbé et indéformable recouvert en tecnoform plus petit velours (voir photo). Les différents coussins volants sont en flocons de plume lavés et stérilisés divisés en compartiments, le tout revêtu en toile blanche de coton 100% anti-plume (voir photo). Les éléments confectionnés en tissu sont complètement et facilement déhoussables.

**STRUKTUR:** Die Holzstruktur ist mit Polyurethanschaum mit verschiedenen Stärken und für einen besonderen „Weicheffekt“ mit Resinat in Kombination mit Trikot überzogen. Die Federung wird durch extrem technologisch gefertigte, elastische Bänder gewährleistet, die mechanisch befestigt werden. **POLSTERUNG:** Die Sitzkissen sind aus fassoniertem, formstabilem Polyurethanschaum mit verschiedener Stärke gefertigt und mit Tecnoform und Velours bezogen. Die Rückenlehnen sind aus fas-

La sinergia dei migliori materiali e l'impiego delle più avanzate tecnologie hanno permesso la realizzazione di una seduta di elevatissimo comfort. Anima in poliuretano espanso indeformabile densità 35, di elevata resa elastica, sagomato a "taglio diamante". Strato di SOFFIO Plus, schiumato ipersoffice, utilizzato come bombatura esterna per seduta, garantisce un migliore avvolgimento del corpo umano ed offre un'accoglienza pari a quella tradizionalmente attribuita alla piuma d'oca. Il tutto ricoperto da tecnoform e vellutino. Insieme, questi materiali garantiscono il miglior sostegno del corpo e nel tempo la costanza delle forme.

*The combination of the best materials and the use of the most advanced technologies have permitted the realization of an extremely comfortable seat. The core is in non-deforming foamed polyurethane with a 35 density, with a high elasticity performance and a "diamond cut" shape. A layer of "SOFFIO Plus", a very soft foamed material used as an external padding for seats, ensures an improved envelopment of the body and a comfort equal to that traditionally attributed to goose feathers. Covered with Tecnoform and imitation velvet. The combination of these materials ensures the best possible support for the body and durable shape retention.*

*La synergie des meilleurs matériaux et l'emploi des technologies les plus avancées ont permis la réalisation d'une assise au confort très élevé. Ame en polyuréthane expansé indéformable densité 35, au rendement élastique élevé, galbé avec "taille en tête de diamant". La couche de SOFFIO Plus, moussée hyper-douce, utilisée comme courbure extérieure pour assise, garantit une meilleure position du corps humain et offre une sensation semblable à celle habituellement attribuée à la plume d'oie. Le tout recouvert de tecnoform et petit velours. Ensemble, ces matériaux garantissent un meilleur soutien du corps et dans le temps la constance des formes.*

*Die Synergie der besten Materialien und der Einsatz fortschrittlicher Technologie haben die Herstellung extrem komfortabler Polstermöbel ermöglicht. Kern aus formstabilem, besonders elastischem und im Diamantschnitt geformtem Polyurethanschaum mit Dichte 35. Die besonders weiche Schaumstoffschicht SOFFIO Plus gewährleistet an der äußeren Wölbung der Sitzpolster für eine einwandfreie Körperanpassung, wie sie im Allgemeinen von der Daune zu erwarten ist. Bezogen sind die Möbel mit Tecnoform und Velours. Gemeinsam bieten diese Materiale für beste Körperstützung und lange anhaltende Formgleichheit.*
